Professional Summary

Gen AI Developer with hands-on experience building production-grade AI systems using Python, LLMs, RAG, LangChain, and MCP. Developed a Grant Intelligence Platform scraping 500+ funding opportunities with AI-powered eligibility extraction and RAG chatbot, and an MCP-based NL-to-SQL agent reducing query time by 40%. Currently interning at CubeAI Solutions delivering GenAI automation pipelines across document processing and agentic workflows. Passionate about building real-world Gen AI and LLM-powered applications.

Skills

Programming Languages: Python, SQL, Java (Basics)

Generative AI: LLMs, RAG, LangChain, MCP, Prompt Engineering, NLP, Transformers, Groq API

Machine Learning: Linear Regression, Logistic Regression, Decision Tree, Random Forest

Libraries & Frameworks: NumPy, Pandas, Matplotlib, Scikit-Learn

Web Scraping & Automation: BeautifulSoup, Selenium, Playwright

Databases: MySQL, ChromaDB (Vector Database)

Tools & Platforms: Git, GitHub, Streamlit, FastAPI, REST API, N8N, PyCharm, Google Colab, Linux

CS Fundamentals: Data Structures & Algorithms (DSA)

Projects

Customer Churn Prediction System

Developed a Customer Churn Prediction System using Decision Tree and Random Forest on a telecom dataset of 7,000+ customer records. Performed data preprocessing, feature encoding, and EDA to prepare data for ML. Improved churn recall from 48% to 70% through hyperparameter tuning, achieving 75% classification accuracy — enabling effective identification of at-risk customers.

AI-Powered Fund & Grant Intelligence Platform

Developed an end-to-end AI platform for automated grant discovery and analysis from 10+ sources, scraping 500+ funding opportunities. Implemented AI-powered eligibility extraction and summarization using NLP and Transformer-based LLMs, and built a RAG chatbot backed by a Vector Database (ChromaDB) for intelligent querying. Designed an interactive dashboard with analytics, filtering, and fully automated scraping-to-database workflows, cutting manual research time by 60%.

MCP AI Database Agent

Built an AI-powered database agent using Model Context Protocol (MCP) enabling Natural Language-to-SQL conversion, reducing manual query writing time by 40%. Integrated Transformer-based LLMs for context-aware query generation and designed a modular, scalable MCP-based architecture supporting 5+ automated database workflows.

Internship Experience

Gen AI Intern | Cubeaisolutions Tech Pvt Ltd

May 2026 – Present

- Built RAG pipelines using LangChain + ChromaDB for document processing automation, reducing manual effort by 50%
- Developed agentic AI workflows using MCP for multi-step task automation across business use cases
- Implemented prompt engineering strategies improving LLM response accuracy for structured data extraction

Web Scraping Intern | Cubeaisolutions Tech Pvt Ltd

Mar 2026 – May 2026

- Scraped 50+ dynamic and static websites using BeautifulSoup and Selenium, automating structured data collection workflows
- Built end-to-end data preprocessing pipelines reducing manual data cleaning time by 40%

Certifications

- Introduction to Model Context Protocol (MCP) – Anthropic
- Foundation: Introduction to LangChain – Python & Building Reliable Agents – LangChain
- AI Developer Certification – C# Corner

Education

B.Tech – Artificial Intelligence and Data Science

2023–2027

Muthayammal College of Engineering, Rasipuram

CGPA: 8.03/10

Higher Secondary Education (HSC)

2022–2023

Sri Lakshmi Vidhyalaya Matric Higher Secondary School, Villupuram

Percentage: 76%
